                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               밁
The present sequence is that of a protein capable of binding human interleukin-13 (IL-13) and/or human interleukin-4 (IL-4) in the presence of IL-4 receptor alpha. It was deduced from cDNA (see AAA88907) isolated from a human activated tonsilar cDNA library. This IL-13 receptor alpha-1 polypeptide can be used to inhibit IL-13 or IL-4 induced IGE synthesis in B cells, useful in the treatment of diseases in which IGE or Th2

The invention also relates to a method of treatment of a disease in which IL13 and IL4 cause adverse effects. The method is useful for treating a disease in which IL-13 and IL-4 cause adverse effects, e.g. atopy, atopic dermatitis, allergy, rhinitis, eczema, asthma or AIDS. The polypeptides of the invention are useful in raising antibodies. It is also useful in gene therapy. The present sequence is human interleukin-13 receptor alpha
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Treating a effects, e.

                                                                                                                                                                                                                                antigen unresponsiveness, selective 1gA deficiency, selective 1gM deficiency, selective 1gM deficiency, selective 1gM deficiency with hyper 1gM, transient hypogammaglobulinemia of infancy, Burkitt's 1ymphoma, intermediate lymphoma, follicular lymphoma, type II lymphoma, intermediate lymphoma, follicular lymphoma, type II hypersensitivity, rheumatoid arthritis, autoimmune mediated haemolytic anaemia, myasthenia gravis, hypoadremocorticism, glomerulonephritis, or ankylosing spondylitis. The PRO proteins are also useful for preparing a medicament for treating a condition that is responsive to the PRO protein, e.g. cancer or immune-mediated inflammatory diseases. The PRO coding sequences are useful as hybridization probes in chromosome and gene mapping, in preparing PRO proteins, or in generating transgenic animals or knockout animals, which in turn are useful in the development
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New PRO polypeptide, useful for diagnosing and treating a B cell related disorder, e.g. Burkitt's lymphoma, rheumatoid arthritis, autoimmune mediated hemolytic anemia, myasthenia gravis or ankylosing spondylitis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Antiallergic; Muscular; Neuroprotective; Nephrotropic; Antiinflammatory; Gene Therapy; PRO; B cell related disorder; cancer; immune-mediated inflammatory disease; human.

                                                                                                                                                                               The invention relates to novel polynucleotide and polypeptides for treating psoriasis or a sequence having at least 80% identity to the above sequences. The nucleic acid is useful for preparing a composition for diagnosing or treating psoriasis in a mammal. This sequence corresponds to one of the polypeptides of the invention.
                                                                                                                                      Sequence

```
cc which encodes the mature form of a polypeptide capable of binding human CC IL-13 (interleukin 13, a cytokine) and/or binding human IL-4 (designated CI IL-13 receptor alpha 1 subunit) appearing as ADN62575. Also included are CC a vector comprising the nucleic acid molecule and a host cell comprising the nucleic acid molecule and a host cell comprising CC the vector. The nucleic acids are useful as probes or primers or in the CC analysis of allelic variation. The polypeptides are useful for binding CC human IL-13 and/or binding human IL-4 and act as inhibitors by CC interfering with the interaction between human IL-13 or IL-4 and their CC interfering with the interaction between human IL-13 or IL-4 and their CC diseases such as atopy, atopic dermatitis, allergy, rhinitis, eczema, CC asthma, AlDS, cancer, inflammatory disease (e.g. rheumatoid arthritis and CC inflammatory bowel disease), multiple sclerosis, Alzheimer's disease, CC fupus erythematosus, thyroiditis, diabetes, uveitis, psoriasis, CC urticaria, nephrotic syndrome, glomerulonephritis, ulcerative colitis, CC urdicaria, nephrotic syndrome, glomerulonephritis, ulcerative colitis, CC used for producing antibodies, which can be used for diagnosing diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match

                                                                                                                Query Match
                                                                                                                                                                                TAT polypeptide; and methods and compositions for the treatment or diagnosis of cancer in mammals. TAT polypeptides, nucleic acids, antibodies, antagonists, binding molecules and compositions are useful for diagnosing or treating a cell proliferative disorder associated with increased TAT expression, particularly cancers such as breast cancer, colorectal cancer, lung cancer, ovarian cancer, liver cancer, bladder cancer, particularly cancers of the central nervous system, melanoma and leukaemia. TAT nucleic acids may further be used as hybridisation probes, in chromosome and gene mapping, in chromosome identification and in gene therapy. The present sequence represents a TAT polypeptide of the invention
                                                                                                                                                                                                                                                                                                                                                                                  polypeptides; expression vectors and host cells comprising a TAT nucleic acid; an antibody specific for a TAT polypeptide; a peptide or organic molecule which binds to a TAT polypeptide; fusion proteins comprising a
                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to human tumour-associated antigenic target (TAT) polypeptides, and their related nucleic acids. The TAT polypeptides are overexpressed in cancer tissues compared to normal tissues, and may thus serve as effective targets for the diagnosis and treatment of cancer in mammals. The invention also relates to nucleic acid and polypeptide sequences at least 80% identical to the TAT nucleic acids and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New tumor-associated antigenic target polypeptides and nucleic useful in preparing a medicament for treating or detecting a proliferative disorder, e.g. breast, lung, colorectal, ovarian
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Tumour-associated antigenic target; TAT; human; overexpression; cutumour; diagnosis; cell proliferative disorder; breast cancer; colorectal cancer; lung cancer; ovarian cancer; liver cancer; central nervous system cancer; bladder cancer; pancreatic cancer; cervical cancer; melanoma; leukaemia; hybridisation probe;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  B
The invention relates to a novel nucleic acid molecule encoding a polypeptide. The fusion polypeptide consists (R1)x-(R2)y-F, where -231 and 24-231 of a fully defined sequence of 231 amino acids (ABC31472), which sequences may comprise 1-10 modifications, R2 is
                                                                                                                                                                                                 New nucleic acid molecules encoding polypeptides capable of binding interleukin-4 and interleukin-13, useful for diagnosing and/or treating asthma, lupus, Grave's disease, hepatic fibrosis, HIV infection, cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                 27-FEB-2004; 2004US-0548541P

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       CC sequences may comprise one to three modifications, F is a fusion
CC component, and x and y are each independently a positive integer 1. The F
CC is a multimerizing component, a serum protein, or a molecule capable of
CC binding a serum protein, where the multimerizing component is an
CC immunoglobulin-derived domain, a cleavable region (C-region), an amino
CC acid sequence between 1-500 amino acids in length, optionally comprising
CC at least one cysteine residue, a leucine zipper, a helix loop motif, or a
CC coil-coil motif. The immunoglobulin-derived domain is the FC domain of
CC IgG or the heavy chain of IgG. A fusion protein of the invention has
CC antiasthmatic, antiallergic, dermatological, antiinflammatory,
CC immunosuppressive, cytostatic, hepatotropic, anti-HIV, virucide,
CC gastrointestinal-gen, antibacterial, fungicide, antiparasitic, antiulcer,
CC antithyroid, and nephrotropic activity. The protein has a use in gene
CC therapy, and acts as an interleukin-antagonist. The methods and
CC compositions of the invention are useful for the diagnosis, prevention
CC and/or treatment of diseases or conditions associated with aberrant
CC expression or activity of II-4 and/or II-13, such as asthma, atopic
CC dermatitis, lupus, nephritis, Garve's disease, hepatic fibrosis, HIV
CC and fungal infections. The present sequence represents human II-13
CC receptor alpha-1.

Lin LL,
                                                                                                                    Crystalline antibody useful for designing agent that interacts polypeptide, comprises anti-IL-13 antibody capable of binding s 13 polypeptide to which IL-4R polypeptide binds in vivo.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Antiinflammatory; Immunosuppressive; Dermatological; Gastrointestinal-Gen.; Vasotropic; CNS-Gen.; Hepatotropic; cancer; eosinophilia; fibrosis; inflammation; autoimmune d
           The invention relates to a crystalline antibody (1), where the antibody comprises an anti-interleukin (II)-13 antibody or its Rab fragment, and is capable of binding a site of an II-18 polypeptide to which an II-4R (interleukin-4 receptor) polypeptide binds in vivo. Also included are
                                                                                                                                                                                                                                                                                                         09-JUN-2004; 2004US-0578473P

                                                                        밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 prophylactically treating a subject susceptible to a condition associated with IL-13 activity, and the use of an agent (A1) designed or selected by the methods above in the manufacture of a medicament for the prophylaxis or treatment of a condition associated with IL-13 activity. The antibody crystal and methods are useful for designing an agent that interacts with IL-13 polypeptide. The agent is useful for treating an IL-13 condition chosen from allergic, asthma or nonallergic asthma, cancer, airway inflammatory condition of the skin, gastrointestinal organs, blood vessels or connective tissue, and an autoimmune condition of the skin, gastrointestinal organs, blood vessels, or connective tissue, chronic obstructive pulmonary disorder, cystic fibrosis, pulmonary fibrosis, allergic rhinitis, atopic dermatitis, inflammatory bowel disease, Crohn's disease, cirrhosis, scleroderma, or Hodgkin's lymphoma. The present

The invention describes an antibody, or its antigen-binding, that binds CC to interleukin (IL)-13. Also described are: a pharmaceutical composition CC comprising the antibody, or its antigen-binding fragment above and a CC pharmaceutical carrier; a nucleic acid that comprises a sequence that CC encodes a polypeptide that comprises a heavy chain immunoglobulin CC variable region or a light chain immunoglobulin variable region described CC above; a host cell comprising a nucleic acid sequence that encodes the CC antibody, or its antigen-binding fragment, above; providing a recombinant CC antibody; treating an IL-13-associated disorder; and detecting the CC useful for diagnosing, preventing, and/or treating IL-13 associated CC disorder, e.g. asthmatic disorders, atopic disorders, chronic obstructive CC pulmonary disease (COPD), conditions involving airway inflammation, CC conditions, autoimmune conditions tumors or cancers, viral infection, CC suppression of expression of protective type 1 immune responses, allergic finities, or inflammatory bowel disease. This is the amino acid sequence
                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match

The invention relates to polypeptides capable of binding human interleukin (IL)-13 and/or IL-4 in the presence of IL-4 Ralpha. The invention also relates to a method of treatment of a disease in which III3 and II4 cause adverse effects. The method is useful for treating a disease in which IL-13 and IL-4 cause adverse effects, e.g. atopy, atopic dermatitis, allergy, rhinitis, eczema, asthma or AIDS. The polypeptides of the invention are useful in raising antibodies. It is also useful in gene therapy. The present sequence is human interleukin-13 receptor alpha (II-13 Ralpha) mutant protein. Note: This sequence is not shown in the
                                                                                                                                                                                                                                                                        Treating a disease in which interleukin (IL)-13 and IL-4 cause adverse effects, e.g. atopy, atopic dermatitis, allergy, rhinitis, eczema, astl or AIDS, comprises administering a polypeptide or soluble polypeptide.

New monoclonal antibodies against interleukin-13 receptor alpha, for treating fibrosis, Hodgkin's disease, ulcerative colitis, scleroderma, allergic rhinitis, oncological conditions, asthma or inflammatory disorder.
                                         Or
                                                                                                  useful
```

Disclosure; SEQ ID NO 4; 99pp; English.

13 receptor alpha-1 chain (IL-13R alpha-1) antagonists and can be used for treating certain conditions induced by IL-13. Specifically, it refers to annibodies that bind to IL-13R alpha-1 and inhibit or modulate IL-13 and IL-4 induced signalling. IL-13 is a mediator in the immunostimulatory system, such that it is involved in the induction of IgE, IgG4 and T-helper cells and accordingly is implicated in conditions from anaphylaxis to hay fever and asthma. As such, the present invention describes these novel antibodies as antiinflammatory, cytostatic, antiulcer, dermatological, antiallergic and antiasthmatic. The methods and compositions are useful for treating various disorders including fibrosis, Hodgkin's disease, ulcerative colitis, scleroderma, allergic rhinitis, oncological conditions and chronic obstructive pulmonary disease. This polypeptide sequence is the human IL-13 alpha 1 receptor protein of the invention. invention relates toa novel antibodies that function as interleukin

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to polypeptides capable of binding human interleukin (IL)-13 and/or IL-4 in the presence of IL-4 Ralpha. The invention also relates to a method of treatment of a disease in which IL13 and IL4 cause adverse effects. The method is useful for treating a disease in which IL-13 and IL-4 cause adverse effects, e.g. atopy, atopic dermatitis, allergy, rhinitis, eczema, asthma or AIDS. The polypeptides of the invention are useful in raising antibodies. It is also useful in gene therapy. The present sequence is human interleukin-13 receptor alpha (IL-13 Ralpha) mutant protein. Note: This sequence is not shown in the specification, however it is constructed based on human IL-13 Ralpha protein shown as SEQ ID NO:9 in the specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Treating a disease in which interleukin (IL)-13 and IL-4 cause adverse effects, e.g. atopy, atopic dermatitis, allergy, rhinitis, eczema, asthma or AIDS, comprises administering a polypeptide or soluble polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence

```
sequence (see AAB19807) deduced from isolated cDNA by having residue 130 as Ile rather than Thr and residue 358 as Asp rather than Gly. This IL-13 creceptor alpha-1 polypeptides can be used to inhibit IL-13 or IL-4 induced IgE synthesis in B cells, useful in the treatment of diseases in which IgE or Th2 differentiation plays a role, e.g. atopy, atopic dermatitis, allergy, rhinitis, eczema, asthma or AIDS. Antibodies raised against the polypeptide are useful for detecting IL-13 and IL-4 receptor or parts of them which have been shed from cells as a result of disease, e.g. cancer, leukaemia, atopy atopic dermatitis, diabettes, rhinitis, cezema, asthma, lupus erythematosus, AIDS, thyroiditis, diabettes, the lammatory bowel disease, glomerulonephritis, ulcerative colitis, croming disease, Sjogren's syndrome and toxoplasmosis. Note: The present sequence is not shown in the specification but is derived from the IL-13 creceptor alpha 1 sequence given in figure 1 (see AAB19807)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match

IL-13Ralpha 1 protein - rat
C;Species: Rattus norvegicus (Norway rat)
C;Date: 01-Feb-2002 #sequence revision 01-Feb-2002 #text_change 09-Jul-2004
C;Accession: JC7773 A;Gene: il-13ralpha1 A;Accession: JC7773 A;Molecule type: mRNA A;Residues: 1-426 <PIE> R;Pierrot, C.; Beniguel, L.; Begue, A.; Khalife, J. Biochem. Biophys. Res. Commun. 287, 969-976, 2001 A,Tille: Expression of a functional IL-13Ralphal by A;Reference number: JC7773; PMID:11573960 A;Cross-references: UNIPROT:Q8VHC2; UNIPARC:UPI000017CC49; GB:AY044251 C;Comment: This protein is an functionally binding protein involved in Genetics: Query Match Local 71.2%;
pal Similarity 73.3%;
313; Conservation Score 1653; DB 2; Length 426; Pred. No. 3e-121; 33; Mismatches 67; Indels 4; rat Ħ cells in B cell prolifera

patabase :

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       FUNCTION: Binds IL13 with a low affinity. Together with IL41 can form a functional receptor for IL13. Also serves as an alternate accessory protein to the common cytokine receptor chain for IL4 signaling, but cannot replace the function of C in allowing enhanced IL2 binding activity.

SUBUNIT: Interleukin 13 receptor is a complex of IL4R, IL131 and possibly other components.

SUBCELLULAR LOCATION: Membrane; single-pass type I membrane
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  activation.
